

Triplex and 4 Mix are aeration islands designed to introduce large amounts of air into a single injection point. Triplex can give the flow a precise direction, while 4MIX generates a 360° effect.

These aeration solutions are suitable both as emergency solutions and for large aeration tanks with high organic loads, such as leachates from dumpsites or industrial treatments.

The floating structure for this system is available in stainless steel with 4 die-cast casting floats with excellent thicknesses and UV resistant materials.

TRIPLEX

4 MIX
